

Base R

Cheat Sheet

Getting Help

Accessing the help files

?mean

Get help of a particular function.

help.search('weighted mean')

Search the help files for a word or phrase.

help(package = 'dplyr')

Find help for a package.

More about an object

str(iris)

Get a summary of an object's structure.

class(iris)

Find the class an object belongs to.

Using Packages

install.packages('dplyr')

Download and install a package from CRAN.

library(dplyr)

Load the package into the session, making all its functions available to use.

dplyr::select

Use a particular function from a package.

data(iris)

Working Directory

getwd()

Find the current working directory (where inputs are found and outputs are sent).

setwd('C://file/path')

Change the current working directory.

Use projects in RStudio to set the working directory to the folder you are working in.

Vectors

Creating Vectors

| | | |
|--------------------------------|-------------|-----------------------------|
| <code>c(2, 4, 6)</code> | 2 4 6 | Join elements into a vector |
| <code>2:6</code> | 2 3 4 5 6 | An integer sequence |
| <code>seq(2, 3, by=0.5)</code> | 2.0 2.5 3.0 | A complex sequence |
| <code>rep(1:2, times=3)</code> | 1 2 1 2 1 2 | Repeat a vector |
| <code>rep(1:2, each=3)</code> | 1 1 1 2 2 2 | Repeat elements of a vector |

Vectors Functions

sort(x)

Return x sorted.

rev(x)

Return x reversed.

table(x)

See counts of values.

unique(x)

See unique values.

Selecting Vector Elements

By Position

`x[4]`

The fourth element.

`x[-4]`

All but the fourth.

`x[2:4]`

Elements two to four.

`x[-(2:4)]`

All elements except two to four.

`x[c(1, 5)]`

Elements one and five.

By Value

`x[x == 10]`

Element which are equal to 10.

`x[which(x==10)]`

Element which are equal to 10.

`x[x < 0]`

All elements less than zero.

`x[x %in% c(1,2,5)]`

Elements in the set {1, 2, 5}.

Named Vectors

`x['apple']`

Element with name 'apple'.

Programming

For Loop

```
for (variable in sequence) {  
  Do something  
}
```

Example

```
for (i in 1:4) {  
  j <- i + 10  
  print(j)  
}
```

While Loop

```
while (condition) {  
  Do something  
}
```

Example

```
while (i < 5) {  
  print(i)  
  i <- i + 1  
}
```

If Statement

```
if (condition) {  
  Do something  
} else {  
  Do something  
}
```

Example

```
if (i > 3) {  
  print('Yes')  
} else {  
  print('No')  
}
```

Functions

```
func_name <- function(var) {  
  Do something  
  return(new_variable)  
}
```

Example

```
square <- function(x) {  
  squared <- x*x  
  return(squared)  
}
```

Reading and Writing Data

Also see the **readr** package.

| Input | Output | Description |
|--|--|--|
| <code>df <- read.table('file.txt')</code> | <code>write.table(df, 'file.txt')</code> | Read and write a delimited text file. |
| <code>df <- read.csv('file.csv')</code> | <code>write.csv(df, 'file.csv')</code> | Read and write a comma separated value file. This is a special case of <code>read.table/write.table</code> . |
| <code>load('file.RData')</code> | <code>save(df, file = 'file.RData')</code> | Read and write an R data file, a file type special for R. |

Conditions

| | | | | | | | |
|---------------------|-----------|------------------------|--------------|------------------------|--------------------------|-------------------------|------------|
| <code>a == b</code> | Are equal | <code>a > b</code> | Greater than | <code>a >= b</code> | Greater than or equal to | <code>is.na(a)</code> | Is missing |
| <code>a != b</code> | Not equal | <code>a < b</code> | Less than | <code>a <= b</code> | Less than or equal to | <code>is.null(a)</code> | Is null |
| <code>c e</code> | c or e | <code>c & y</code> | c and y | | | | |

Types

Converting between common data types in R.
Can always go from a higher value in the table to a lower value.

| | | |
|---------------------------|-----------------------------------|--|
| <code>as.logical</code> | TRUE, FALSE, TRUE | Boolean values (TRUE or FALSE) |
| <code>as.numeric</code> | 1, 0, 1 | Integer or floating point numbers |
| <code>as.integer</code> | 1, 0, 1 | Integers |
| <code>as.character</code> | '1', '0', '1' | Character strings. Generally preferred to factors |
| <code>as.factor</code> | '1', '0', '1' levels: '1', '0' | Character strings with preset levels. Needed for some statistical models |

Maths Functions

| | | | |
|---------------------------|---------------------------------|--------------------------|-------------------------|
| <code>log(x)</code> | Natural log. | <code>sum(x)</code> | Sum. |
| <code>exp(x)</code> | Exponential. | <code>mean(x)</code> | Mean. |
| <code>max(x)</code> | Largest element. | <code>median(x)</code> | Median. |
| <code>min(x)</code> | Smallest element. | <code>quantile(x)</code> | Percentage quantiles. |
| <code>round(x, n)</code> | Round to n decimal places. | <code>rank(x)</code> | Rank of elements. |
| <code>signif(x, n)</code> | Round to n significant figures. | <code>var(x)</code> | The variance. |
| <code>cor(x, y)</code> | Correlation. | <code>sd(x)</code> | The standard deviation. |

Variable Assignment

```
> a <- 'apple'
> a
[1] 'apple'
```

The Environment

| | |
|------------------------------|--|
| <code>ls()</code> | List all variables in the environment. |
| <code>rm(x)</code> | Remove x from the environment. |
| <code>rm(list = ls())</code> | Remove all variables from the environment. |

You can use the environment panel in RStudio to browse variables in your environment.

Lists

```
l <-list(x = 1:5, y = c('a', 'b'))
```

A list is a collection of elements which can be of different types.

| | | | |
|----------------------|---------------------------------------|-------------------|-------------------------------------|
| <code>l[[2]]</code> | <code>l[1]</code> | <code>l\$x</code> | <code>l['y']</code> |
| Second element of l. | New list with only the first element. | Element named x. | New list with only element named y. |

Miscellaneous

Arithmetics

```
16 = 3*5 + 1
```

`16 %/% 3` Quotient (result 5).
`16 %% 3` Remainder (result 1).

Permutations

`sample(x, size, replace = F)` Give a sample of the specified size from the elements of x.
`sample(c(1:5), 10, replace = TRUE)`
`sort(x, decreasing = F)` Sort a vector or factor.
`sort(c(5, 1, 7, 3))` (Result 1 3 5 7)
`order(x, decreasing = F)` Returns a permutation rearranging x.
`order(c(5, 1, 7, 3))` (Result 3 1 4 2)

Function tests

`replicate(n, f(x))` Execute n times the function f(x).
`replicate(10, exp(1000000))`
`system.time(f(x))` Return the CPU times used to compute f(x).
`system.time(exp(1000000))`

Memo

Strings

Also see the **stringr** package.

| | |
|--|---|
| <code>cat(x, y, sep = '')</code> | Join and print multiple vectors together. |
| <code>cat(x, collapse = '')</code> | Join and print elements of a vector together. |
| <code>grep(pattern, x)</code> | Find regular expression matches in x. |
| <code>gsub(pattern, replace, x)</code> | Replace matches in x with a string. |
| <code>toupper(x)</code> | Convert to uppercase. |
| <code>tolower(x)</code> | Convert to lowercase. |
| <code>nchar(x)</code> | Number of characters in a string. |

Factors

| | |
|---|--|
| factor(x) Turn a vector into a factor. Can set the levels of the factor and the order. | cut(x, breaks = 4) Turn a numeric vector into a factor by 'cutting' into sections. |
|---|--|

Statistics

| | | |
|--|---|--|
| lm(y ~ x, data=df) Linear model. | t.test(x, y) Perform a t-test for difference between means. | prop.test Test for a difference between proportions. |
| glm(y ~ x, data=df) Generalized linear model. | pairwise.t.test Perform a t-test for paired data. | aov Analysis of variance. |
| summary or fivenum Get more detailed information out a model. | | |

Distributions

| | Random Variates | Density Function | Cumulative Distribution | Quantile |
|----------|-----------------|------------------|-------------------------|---------------|
| Normal | rnorm | dnorm | pnorm | qnorm |
| Poisson | rpois | dpois | ppois | qpois |
| Binomial | rbinom | dbinom | pbinom | qbinom |
| Uniform | runif | dunif | punif | qunif |

Plotting

Also see the **ggplot2** package.

plot(x)
Values of x in order.

plot(x, y)
Values of x against y.

hist(x)
Histogram of x.
